CASE STUDY: OIL & GAS INDUSTRY

JRI- "Pig" Washer

Pipeline "pigging" process

APPLICATION DETAILS

This company is a world-wide leader in providing pipeline equipment and services to the oil and gas industry.

One service that they provide to their customers is the maintenance and cleaning of oil pipelines on service contracts. By providing cleaner pipelines to it's customers, they help to improve line flow, reduce corrosion rates, and permit inspection.

To accomplish these tasks they use inline "pigs" to clean the pipelines. These pigs are reused and that requires cleaning the pigs after each use. Heavy sludge and oil deposits coat the pig making aggressive cleaning power necessary.

This industry leader has found JRI washers to be integral to the services that they provide to their customers.

JRI SOLUTION

The customized solution provided is a high pressure, solvent-free automatic washer.

IMPORTANT FEATURES

- ✓ Popular sizes ranging from 5hp/3.7kw to 15hp/11.1kw washing pumps
- ✓ Standard weight capacities from 1000lbs./453kg to 2000lbs./907kg
- ✓ Heating capabilities to 180°F/82°C
- ✓ Stainless steel spray nozzles with 360° spray coverage
- ✓ Large debris screens
- ✓ "Weir" type overflow for sludge capture in wash tank
